

MAJESTIC P.L.T.

A B&L Worldwide initiative

A man wearing a straw hat and a plaid shirt stands on the left, and a woman in a business suit stands on the right, holding a tablet. They are in a field with a blue sky background. Overlaid on the image is a semi-transparent digital interface with various icons like a shopping bag, a truck, a lightbulb, and a gear, connected by lines. The text is centered over this interface.

We are a **disruptive integration of production chains, logistics, and technology, powered by modular intelligence that will **redefine** global commerce, converging into the most advanced and connected ecosystem, designed for **universal** market access.**

The peak of evolution.

MAJESTIC P.L.T. (Production, Logistics & Technology) is a global initiative designed to transform how **goods move, systems connect, and communities thrive**. Built on B&L Worldwide and its partners decades of experience and global reach, the platform integrates production, logistics, and technology into a unified, sustainable ecosystem.

Our mission is to **streamline sourcing, reduce intermediation, and deliver cost-efficient, tech-enabled operations** that unlock new revenue channels and long-term value. Our vision is bold: to become the world's leading vertically integrated supply platform — empowering communities and driving scalable growth across international markets.

With consolidated markets, ILTT and its strategic alliances have positioned players with presence in multiple locations on the East coast and the Caribbean, facilitating this initiative to make an easy market penetration, growth, expansion, and evolution.

Multidimensional and experienced management team

Captain Craig Baptiste

With over 23,000 flight hours across Boeing and Airbus fleets, Captain Craig Baptiste brings unmatched expertise in global air carrier operations. A graduate of Embry-Riddle Aeronautical, he is a proven leader in high-stakes aviation environments. As a key figure in the MAJESTIC P.L.T. initiative, he ensures that all logistics and aeronautical components are executed with precision, safety, and global scalability.

Mr. George Hazy

George is a senior aviation executive with over 30 years of experience leading major commercial and regional operations. He served as SVP of Customer Service for American Eagle, overseeing 1,600 daily flights across 180 stations, and led American Airlines' largest international and cargo expansion in Miami. He directed multi-billion-dollar terminal projects in Miami and Los Angeles, and as President of Executive Airlines, doubled operations while achieving record profitability.

Mr. Ralph Ledee

Ralph Ledee is a Caribbean business leader and aviation entrepreneur with a legacy rooted in distribution, real estate, and travel retail. As principal of ILTT and founder of Rum Jumbie, he transformed a family-run liquor store into a \$60M regional powerhouse, representing world-class brands across the Caribbean. With holdings spanning spirits, food, fuel, and hospitality, Ralph continues to drive dynamic ventures and philanthropic initiatives, building on a family legacy that dates back to 18th-century St. Barthélemy.

Lt. Col.® Mauricio Zuleta

A seasoned aviator and R&D leader with over 7,300 flight hours and a experience leading science and technology programs for the Colombian Air Force and Ministry of Defense. His expertise spans robotics, SW development, and intelligent systems design. With deep insight into aeronautical operations and supply chain strategy, he brings the technical precision and visionary leadership that power Majestic P.L.T.'s global adaptability and founder-focused innovation.

Effective and professional development team

Mr. Robert Asprilla

Robert is a seasoned strategist who has spent decades at the intersection of policy, advocacy, and community empowerment, bridging government, business, labor, and grassroots movements to advance equity across the United States and the Americas. As CEO of Global Passport Academy and co-founder of the Afro Interamerican Forum on Climate Change (with MIT), he brings global reach to local impact, championing sustainability, education, and inclusive development through visionary leadership and cross-sector collaboration.

Mr. Todor Ivanov

Todor Ivanov is the Founder and CEO of Splendor Labs, leading the development of high-performance blockchain infrastructure for AI-native payments and machine commerce. He began his career at Saxo Bank, specializing in FX, commodities, and indices trading, and later managed multiple trading desks and market-making firms. With 20+ years in capital markets, he has driven innovations across fintech, blockchain, and AI. Todor also leads WhiteRock's venture capital investment strategy.

Captain Jonathan Earl Baptiste

A second-generation aviation and business leader, Jonathan is an airline captain with American Airlines and holds degrees in aeronautics and communications. Fluent in English and Spanish, he blends global business experience with creative strategy, continuing the Baptiste legacy across aviation, real estate, and international markets.

Mr. Noah Ledee

Noah is a commercial pilot and senior executive active in the family's Caribbean real estate and distribution businesses. A graduate of Embry-Riddle with a degree in economics, he leads development projects in St. Maarten and St. Barths, and has expanded into aviation charter services and a U.S.-based organic food and beverage startup launching in 2025.

Strategy for success.

Consolidating Americas Commercial Triangle, and then to the world

Developing consolidated niche markets between South and North America, and taking advantages of each region production capabilities, it will be expanded to the Caribbean Islands where production is minimal and opportunity is big, we will **create a circular trade economy** to support each one of the nodes in the system, and using extensive modeling and simulation, risk will be managed, products allocated on time and production will reach efficiency as never seen.

ILTT has been a supplier for an extensive network of industries in the Caribbean, from cruise lines to hotel chains, its distribution capabilities, have been key too support their operations, and are ready for a portfolio evolution.

We will pursue strategic alliances with local players established in the Caribbean market, with their presence in many of the smaller islands already with consolidated infrastructure, will help to reduce risks and costs, also will facilitate the entrance for new products that will support the local economy.

Strategy for success.

Fully Integrated Production and Logistics Corridors (FILPROC)

FILPROCs are **modular logistic highways** that unify every link in the supply chain, from origin to destination, into a single, streamlined system. These purpose-built corridors minimize third-party intermediation, reduce added costs, and foster trusted relationships among producers, transporters, and buyers.

By embedding advanced technology and real-time tracking into the backbone of these highways, FILPROCs enable a transparent, efficient, and profitable logistics ecosystem. The result is a scalable infrastructure for sustainable production, trade, and distribution, where every participant benefits and every movement is traceable.

Systemic and modular approach.

The Majestic initiative is powered by three groundbreaking engines: **Fresh-24**, a next-generation perishables production network, delivering speed, traceability, and ESG-aligned access from producers to markets, fulfilling the promise of “crop to table in 24 hours”; **Majestic Air Cargo**, an aviation logistics system built for high-value, time-sensitive cargo with cold chain control, and low-cost direct access; and **PLICE**, a modular web platform that empowers farmers, buyers, and operators with intelligent tools for production forecasting, collaborative sourcing, automated logistics allocation, and seamless access to the entire Majestic ecosystem.

Unlocking the America's Competitive Edge.

FRESH-24 is the production and trade engine of the MAJESTIC P.L.T. initiative, designed to eliminate the disconnect between market demand, regional capacity, and logistics execution across the Americas. It empowers producers with real-time market intelligence, adaptive manufacturing, and synchronized logistics, solving fragmentation, spoilage, and missed revenue opportunities. Anchored in a modular Circular Trade System, FRESH-24 leverages U.S. industrial depth and Latin America's year-round productivity to deliver premium perishables and specialty exports at globally competitive prices.

through AI-powered analytics, digital twins, and ERP integration, it transforms volatile market signals into scalable, high-margin output, dynamically balancing exports and imports across speed, quality, and revenue. By embedding logistics directly into the production cycle, FRESH-24 enables producers to reconfigure supply in real time, respond to demand shifts across multiple corridors, and maintain optimal freshness and pricing—even under volatile conditions. It is a hemispheric engine built for resilience, precision, and investor-grade performance.

Modular integration for efficiency

FRESH-24's logistics network is anchored by Greensboro International Airport, the central U.S. hub for consolidating agricultural and processed goods bound for Latin America and the Caribbean. Specialized nodes in Florida (floriculture), Gettysburg, Pennsylvania (institutional redistribution), and planned expansions to the West Coast and Alaska (Pacific trade and seafood) ensure modular, regionally optimized coverage across key sectors and corridors.

In the Caribbean, Puerto Rico and the Dominican Republic will operate as island consolidation hubs, aggregating products from smaller nations and redistributing U.S. and Colombian exports. These hubs will also support cold-chain infrastructure for seafood, perishables, and high-value goods.

In **Colombia, Rionegro (Medellín) and Cali's international airport** will anchor floriculture and specialty produce exports. These hubs will integrate directly with Lakeland and Greensboro, forming a **bi-directional FILPROC corridor** for both goods and agricultural inputs.

El Salvador will serve as a **Central American logistics pivot**, consolidating regional production and enabling access to both North and South American markets.

Air Logistics the way it should be

Majestic Air Cargo is a vertically integrated aviation logistics platform engineered to drive MAJESTIC's hemispheric infrastructure strategy. By embedding air freight directly into the system architecture, it eliminates third-party dependencies, compresses delivery timelines, and enables simulation-driven routing aligned with perishability, demand, and geopolitical dynamics. Integrated with FRESH-24's intelligence layer, the platform dynamically adjusts schedules, optimizes cargo flow, and ensures synchronized cold-chain performance. Its initial deployment in the Caribbean–South America corridor uses specialized aircraft and digitized workflows to convert fragmented infrastructure into a competitive logistics advantage.

Built as a strategic engine for regional development, Majestic Air Cargo delivers low-cost, high-quality logistics with precision, speed, and reliability. Supporting FRESH-24 and regional producers, it unlocks market access through scalable cold-chain air cargo and data-driven orchestration. With a legacy of operational excellence and innovation, Majestic is positioned to become Latin America's most trusted logistics partner, redefining aviation as a tool for trade empowerment, economic resilience, and sustainable growth across the hemisphere.

Bringing Air Cargo to the 21st. Century

Introducing Low-Cost to General cargo

Majestic Air Cargo is pioneering the first true low-cost air freight model by combining **fleet precision**, data-driven routing, and operational discipline. Its aircraft selection, centered on fuel-efficient freighters like the ATR-72 for the regional operations, A321P2F for continental, and B777 for global reach, maximizes payload-to-cost ratios while enabling corridor-specific deployment. Every flight is orchestrated through a shared intelligence layer with FRESH-24, using real-time perishability scoring, demand forecasting, and predictive routing to minimize idle time and maximize load factors.

Adding value but not cost

Majestic Air Cargo stands apart through its precision in **perishable transport**, using live temperature control and smart cold-chain tech to protect every shipment. Unlike generic carriers, Majestic's aircraft are equipped with real-time sensors and adaptive cooling systems that respond to perishability profiles mid-flight.

Direct and efficient access

Majestic Air Cargo redefines logistics through a fully digitized, **intelligence-driven operation** that eliminates traditional inefficiencies. Clients book directly through a streamlined platform, bypassing costly intermediaries and gaining real-time visibility into routing, pricing, and cargo status. Behind the scenes, Majestic's orchestration engine leverages predictive analytics, corridor simulations, and perishability scoring to optimize aircraft utilization, reduce idle time, and dynamically adjust flight schedules. Every shipment is tagged with smart routing logic that adapts to weather, customs, and demand volatility, turning data into a tactical asset.

Technology as the backbone for success

PLICE is a vertically integrated digital platform engineered to **unify commerce, logistics, and intelligence** across MAJESTIC's ecosystem. It serves as the operational command center for FRESH-24, Majestic Air Cargo, and a real-time marketplace, enabling seamless coordination between producers, buyers, and logistics assets.

Sellers can onboard products with dynamic pricing, regulatory documentation, and shelf-life metadata, while buyers engage through structured procurement workflows, product requests, and automated negotiation protocols.

The platform's architecture is built to eliminate friction, automating everything from booking and routing to cold-chain validation and customs pre-clearance. By interfacing directly with Majestic Air Cargo's orchestration engine, PLICE enables simulation-driven flight scheduling, cargo prioritization, and corridor-specific resource allocation, ensuring that perishables move with precision and speed.

For FRESH-24, PLICE acts as a predictive sourcing engine, aligning demand signals with supplier readiness, perishability thresholds, and geopolitical corridor logic. Every transaction is enriched by real-time analytics, enabling tactical decisions across inventory, transport, and market access—all within a single, modular interface.

Modular, independent and sustainable

- **Production scheduling and forecast**
- **Raw materials procurement**
- **Product showcase**
- **Logistic requirements**
- **Pricing**

- **360 logistic integration**
- **Live process control**
- **Customs and Impo/Expo support**
- **Data intelligence**
- **Dynamic market analysis**
- **Escrow**

- **Product allocation**
- **Auction/commodity trading**
- **Modular services**

Implementation schedule

Phase 1
Strategic Launch
18 Months

Phase 2
Expansion and
capabilities update
12 Months

Phase 3
Global reach and
Hub optimization
12 Months

Phase 4
Fleet expansion and
brand development
12 Months

Phase 5
System
consolidation
12 Months

Q1

Q2

Q3

Q4

Q5

Q6

- Production network development
- Regulatory compliance program
- Facilities development

- Niche market operation
- Production network expansion

- Product portfolio expansion
- Central America hub implementation
- Americas Triangle consolidation

- AOC development
- ACMI Acft. Lease

- Fresh-24 operations (ACMI)

- Majestic Air Cargo Launch
- Fresh-24 operations
- GSA indirect charter operations

- Production data intelligence
- Financial module
- Operational modeling and simulation

- Portfolio showcase
- Trade platform
- Market development module

- Booking platform
- Financial operations
- Open modular services platform

Phase 1 Investment Requirement

\$35,500,000

- USA Facilities development \$16,000,000
 - Greensboro NC.
 - Gettysburg PA.
 - Lakeland FL.
- Colombia Facilities development \$3,000,000
 - Rionegro Ant.
 - Cali Valle.
- Air Logistics implementation \$5,500,000
 - AOC Development (Acquisition / certification)
 - ACMI contract
- PLICE Development \$3,500,000
 - Initial modules
- Other CAPEX and OPEX \$6,000,000
 - Incorporation, legal, management and facilities
 - Payroll

Full program investment requirement

Phase 2: \$60,000,000

- Aircraft Acquisition (2 × A321F) – \$50 million
- Operational Expenditures (OPEX) – \$5 million
- Remote Maintenance Facility Development – \$5 million

Phase 4: \$70,000,000

- Aircraft Acquisition (1 × B777F + 1 × A321F) – \$70 million

Phase 3: \$50,000,000

- Aircraft Acquisition (1 × B777F) – \$45 million
- Ground Support Equipment & Hub Operations – \$5 million

Phase 5: \$70,000,000

- Aircraft Acquisition (1 × A321F) – \$20 million
